“Open source, but not necessarily open process”

Journal
Commons

Toni Prug, Juan
Grigera

Open Process

Journal Commons

Platform choice
Architecture

Shades of
openness

Coding/dev

Further directions

- “... corporate open source indicates a real divide between 'open source' as a license and 'open source' as a wholly transparent way of developing and distributing software. The former is now common and relatively easy. The latter, quite simply, is not.”
[When open source isn't (open enough), Matt Asay, Canonical COO, Nov 2009]
- Open Source was re-applied across society mostly through two aspects: a) the final product has to be open (Open Access); b) sometimes additionally a commitment to transparency and participation (Open Government). THERE ARE NO major Re-applications of the Open Source paradigm that mention in more detail HOW are wide spectrum of open-process aspects going to be achieved.
- This is no coincidence. Beyond its founding analysis, Open Source never defined itself through a set of principles that would ensure open processes in cooperation. Instead, it is a narrow, business, for-profit focused subset of the volunteer driven cooperative model that gave us hacking, Free Software, open protocols, the Internet and the Web. [Series on Commu(o)nism: Open Process, the organizational spirit of the Internet Model, part 1]

Open Process

Journal Commons

Platform choice
Architecture

Shades of
openness

Coding/dev

Further directions

- The most important attributes of the development of the Internet, the Web and their communication-cooperation tools is openness of the entire process of production.
- “Publishing and knowledge production in academia can be significantly improved if aspects of cooperative models developed in software and networking communities are adopted.” [Open-process Academic Publishing]
- “any interested person can participate in the work, know what is being decided, and make his or her voice heard on the issue. Part of this principle is our commitment to making our documents, our WG mailing lists, our attendance lists, and our meeting minutes publicly available on the Internet.” [A Mission Statement for the IETF, RFC3935]

Submissions

Since you are an editor, you can go to the [Overview](#) of current submissions and their status.

Welcome to the paper submission system

You are now registered. To submit your abstract:

Upload your abstract
Click on 'Submit conference paper' and fill in the details

Revise and submit
You can edit the submission, once you have finished editing click on "Submit to Editors". After this you will be to add any additional comments.

After that you are done! You can revisit this page to track the status of your proposal.

Further directions

- Since whole process is on a website. Then **openness==ACLs**
- We can accommodate everything from blind peer review, extend to CE/AB or open process (open process reviewing, early screening). Even publishing of arts works with some form of peer review (curating or collective models).
- We can do it all simultaneously, using one collaborative-reviewing-publishing platform
- We can even display articles/artworks published through those different types of workflows with an icon (so that they can appear next to each other clearly distinguished) signifying: blind-peer-review, open-process peer review, semi-open-process, artwork-peer-reviewed, artwork-curated, etc. (PlaceableWorkflow and acquisition)

Further directions

Signals are a way to choose a series of drop-down menu ratings, signaling to the reader on several aspects of the article, rather than using the binary publish/reject model. Fuzzy logic.

types activist, academic, journalistic

language quality expression/narrative of article

logical flow ideas are well organised in article

originality the argument presented in article is new

evidence there are many established arguments for which the most valuable contribution would be further and better evidence

commendations signal appreciation of the article. brief statement rather than a drop-down menu with options — 50 words.

See [Discussion on Ratings/Signals] And [“Reinventing academic publishing online. Part I: Rigor, relevance and practice”, First Monday, Volume 14, Number 8 - 3 August 2009; Whitworth B and R Friedman]
